

APOLLO MEA Water Device

Structure water anywhere, anytime. The APOLLO can also be used for other liquids such as wine, milk or juice.

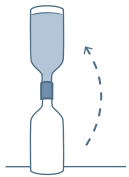

DEVICE THREAD Universal.

Fits most soft drink, soda or spring water bottles.

INSTRUCTIONS

1. Fill one bottle with liquid, leaving some room at the top. Screw on the MEA Water device until it just grips, do not overtighten. Screw the other bottle into the device.

2. Place one hand on each bottle and invert so that the liquid is at the top.

3. To initiate a vortex: keep the bottom bottle steady and quickly rotate the entire unit from the top a few times in an anti-clockwise direction. Allow the liquid to vortex into the bottom bottle.

4. Repeat Steps 2. and 3. another three times.

AFTER VORTEXING

Leave bottle uncapped to allow for outgassing.

Transfer wine to a decanter and let it breathe.

CARE

Screwing a glass bottle into the device too tightly may result in a broken bottleneck.

The device should be rinsed after use. For a deep clean, remove washer and wash all parts by hand. Allow to dry and refit washers.

Your APOLLO comes pre-fitted with washers plus two spares. Replace when discoloured or brittle.

Extra bottles and washers are available at the MEA Water online shop.
